SUMMARY

DevOps Engineer with 2 years of experience, a year of backend and full stack development followed by a year running production services on AWS. Hands-on with GitHub Actions CI/CD, self-service staging deploys, AWS IAM, Bash scripting, disaster recovery with snapshots, Linux, Docker, Nginx, and Datadog monitoring. Immediate joiner, open to on-call rotations.

PROFESSIONAL EXPERIENCE

DevOps Engineer

November 2025 – September 2026

Vedak: Expert Network

Bengaluru, India

- Supported multi-service Node.js backends in production on AWS with Docker, Nginx, MySQL, PostgreSQL and Redis
- Built and maintained CI/CD pipelines in GitHub Actions to build Docker images and deploy backend services
- Built a self-service pipeline that lets developers deploy their own branch to staging with a single command
- Set up AWS IAM roles and policies to control what each service and team member can access
- Worked on disaster recovery for production on AWS, including snapshot-based backups to restore data and services
- Helped the team trace production incidents to root cause using Datadog and the Datadog MCP server for faster debugging
- Created runbooks for production services covering how each service works, deployments and troubleshooting
- Wrote Bash scripts to automate routine operational tasks on Linux servers
- Managed secrets for backend services with Infisical, keeping credentials out of code and config files
- Handled security audit work in Scrut for ISO 27001 certification, preparing evidence for cloud and access controls
- Replaced host-level crontab with a centralized scheduler with run history and Datadog failure alerts, and led the cutover
- Set up centralized error logging and Datadog monitoring across backend services, cutting mean time to resolution by 45%

Full Stack Engineer

November 2024 – October 2025

Vedak: Expert Network

Bengaluru, India

- Built a webhook pipeline streaming Zoom cloud recordings to AWS S3 (SDK v3) with idempotency checks and retries
- Built a queued pipeline that fans out transcript and recording deliveries per client, retrying failures up to 3 times
- Built an AWS SQS event pipeline with a separate consumer service, partial batch failure handling and a dead-letter queue
- Added recording streaming to the team portal and clients with authentication and role-based access control
- Integrated the Cashfree Verification Suite APIs with HMAC-SHA256 webhook signature verification
- Built a two-way API integration with an enterprise client that syncs new experts and call schedules
- Published an internal npm package for shared Sequelize models and migrations, used across backend repositories
- Built React features including WebSocket notifications for 500+ concurrent users and an expert rating system that improved team efficiency, and cut bundle size by 35% with code-splitting

PROJECTS

Self-Hosted Deployment Infrastructure

Docker Compose, Nginx, Certbot, Azure VM, Claude Code [GitHub](#)

- Directed Claude Code to build a Docker Compose and Nginx stack for hosting personal projects on an Azure VM, including multi-domain routing, wildcard SSL via Certbot, and scripted certificate renewal. Deployed it and keep it running.
- Includes separate dev and production Compose setups and multi-platform image builds with Docker buildx

CORS Proxy Platform

Node.js, Express, MongoDB, JWT, Docker [GitHub](#) | [Live](#)

- Built and run a public API proxy with JWT and API-key authentication, plus rate limiting and usage analytics per key, serving 2,000+ requests a month

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EC2, S3, SQS, IAM), Backup & Disaster Recovery, Azure VMs, Linux, Nginx, SSL/TLS
- **Containers & CI/CD:** Docker, Docker Compose, CI/CD (GitHub Actions), Git, GitHub
- **Observability & Operations:** Datadog (monitoring, alerting), PostHog (product analytics), Centralized Error Logging, Production Debugging, Production Cutovers, Runbooks & Documentation
- **Security & Compliance:** ISO 27001 (Scrut), Infisical (secrets), JWT, OAuth 2.0, RBAC, API Keys, HMAC-SHA256
- **Scripting & Languages:** Bash, Python (scripting), JavaScript (ES6+), TypeScript, SQL
- **Application Stack & Data:** Node.js, Express.js, React.js, Redux, REST APIs, Webhooks, Message Queues (AWS SQS, Dead-Letter Queues), MySQL, PostgreSQL, MongoDB, Redis
- **Agentic Tooling:** Claude Code, OpenAI Codex, Datadog MCP server for faster debugging
- **Currently Learning:** Jenkins, Kubernetes (Pods, Deployments, Services), Terraform

EDUCATION

Bachelor of Engineering in Computer Science

December 2020 – July 2024

Visvesvaraya Technological University (VTU), Karnataka

India

- Coding Competition Winner, Class Representative | Certifications: React.js & Node.js (Namastodev)
