SUMMARY

Full stack engineer with 2 years on a multi-service Node.js and TypeScript backend: real-time WebSocket delivery, event-driven ingestion pipelines, and third-party integrations across payments, video conferencing, and LLM APIs, on MySQL, PostgreSQL, and Redis. Ships the React frontends those services power and owns features from API design through production deploy.

PROFESSIONAL EXPERIENCE

Backend Engineer

November 2024 – September 2026

Vedak

Bengaluru, India

- Built real-time WebSocket notification delivery (Socket.IO) sustaining 500+ concurrent users, and shipped the customer-facing and internal React interfaces around it: expert rating with dynamic filtering, and a CRM reporting module; cut bundle size 35% (3.2s to 2.4s load) via code-splitting
- Built webhook-driven ingestion pipeline for Zoom cloud recordings, streaming media directly to AWS S3 via SDK v3 with idempotency guarantees and retry handling, eliminating duplicate ingestion under repeated webhook delivery
- Replaced host-level crontab with a database-driven job scheduler on MySQL and Redis, adding execution history, Datadog failure alerting, and runtime schedule changes without redeployment; planned and led the production cutover
- Integrated Cashfree Verification Suite end to end across its full API surface, implementing HMAC-SHA256 webhook signature verification and a polling-based workaround for an unavailable balance endpoint
- Designed and shipped an LLM-based project classification service on the OpenAI Assistants API with injected domain taxonomy, replacing manual categorisation of incoming records
- Established centralized error logging and Datadog monitoring across backend services, cutting mean time to resolution by 45%
- Authored and published an internal npm package consolidating Sequelize models and migrations, adopted across a multi-repository backend codebase
- Integrated enterprise client APIs into the existing backend workflow, including an automated transcript-delivery pipeline for a global consulting firm

PROJECTS

CORS Proxy Platform

Node.js, Express, MongoDB, JWT, React, Docker

[GitHub](#) | [Live](#)

- Built and operate a public API proxy handling 50,000+ monthly requests, with JWT and API-key authentication, per-key rate limiting, and per-key usage analytics
- Shipped the React/Tailwind console for key issuance, quota visibility, and request-level usage history

Webhook Forwarding Service

TypeScript, Node.js, Express, MongoDB

[GitHub](#) | [Live](#)

- Built a multi-source webhook relay forwarding inbound events to per-source targets, persisting failed deliveries to MongoDB with a retrieval API for inspection and replay

Self-Hosted Deployment Infrastructure

Docker, Nginx, Certbot, Azure, Bash

[GitHub](#)

- Set up and operate the Docker Compose and Nginx stack hosting my personal production services on an Azure VM, covering multi-domain routing, wildcard SSL via Certbot, and scripted certificate renewal checks

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, Python, Bash

Backend: Node.js, Express.js, REST API Design, WebSockets (Socket.IO), Event-Driven Architecture, Webhooks, HMAC-SHA256 Signature Verification, Idempotency & Retry Handling, Sequelize ORM

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (S3, SQS, SDK v3, EC2), Azure VMs, Docker & Docker Compose, Nginx, SSL/TLS (Certbot), Datadog, CI/CD (GitHub Actions)

Integrations: Zoom API & SDK, Cashfree Payments, OpenAI Assistants API

Auth & Security: JWT, OAuth 2.0, Role-Based Access Control (RBAC)

Frontend: React.js, Redux, Vite, Tailwind CSS, Shadcn/ui

Practices: System Design, API Architecture, Production Migrations, Agile

EDUCATION

Bachelor of Engineering in Computer Science

December 2020 – July 2024

Visvesvaraya Technological University (VTU), Karnataka

India

- Coding Competition Winner, Class Representative | Certifications: React.js & Node.js (Namastodev)
